**Additional info**

NKp80, also known as CLEC5C or KLRF1, is a type II transmembrane glycoprotein of the C lectin family, which is expressed in 80 kDa homodimers on NK cells, and subsets of CD8+ alpha/beta T cells, and gamma/delta T cells. It belongs to the activating coreceptors, which induce cytotoxicity, and production of pro-inflammatory cytokines. Its ligand AICL is expressed on myeloid cells. Specificity The mouse monoclonal antibody FP3.2 [FPS392] reacts with human p53 tumour suppressor intracellular protein phosphorylated at CKII site (Ser 392). Application details Flow cytometry: Recommended dilution: 1-4 µg/ml.
