Tested antibodies for Exosome research

Choose our validated antibodies for detection of exosome markers

## Antibodies for Exosome research

Antibodies are an essential tool for basic research, development of diagnostic tests and therapeutics for human disease. Extracellular vesicles (EVs), including exosomes, express antigens with 3D conformations and/or post-translational modifications that often differ from the cellular counterpart. For this reason, most of the antibodies currently available on the market fail to recognize exosome-associated antigens with sufficient sensitivity and specificity. In collaboration with Exosomics Siena Spa, HBM has

validated a list of polyclonal and monoclonal antibodies against common (CD63, CD81, ALIX) and disease-specific (cancer and neurodegenerative diseases) exosomal markers.

## Applications

- Exosome marker detection in different techniques.
- Exosome immunocapture.

## Advantages

- All HBM antibodies are tested and validated for exosome antigen reactivity.
- Available in 2 sizes: 50 µg and 100 µg.

## Shipment and storage

- All HBM antibodies are shipped at 4°C. Storage conditions are described in Antibody datasheet.
